

TABLE CARE INSTRUCTIONS

- Easy to clean with damp cloth. Use mild soap to wipe off the dust on the top and frame.
- A glass can act as a convex lens and cause extreme heat locally. For that reason all heat-sensitive items should be put on a tablecloth or table mat.
- When using a table-barbecue, charcoal sparks can cause melting dots locally, so be careful. Do not leave hot barbecue tongs and skewers on the table.
- Follow the wood grain with sand paper to remove any scratches or oily marks. You can use the sand paper we provide.
