

Components and Hardware List

Glass Shelf

(A) 4 pcs.

Anti-tipping
restraint

(B) 1 pc.

Be sure to check all packing material carefully for small parts, which may have come loose inside the carton during shipment.

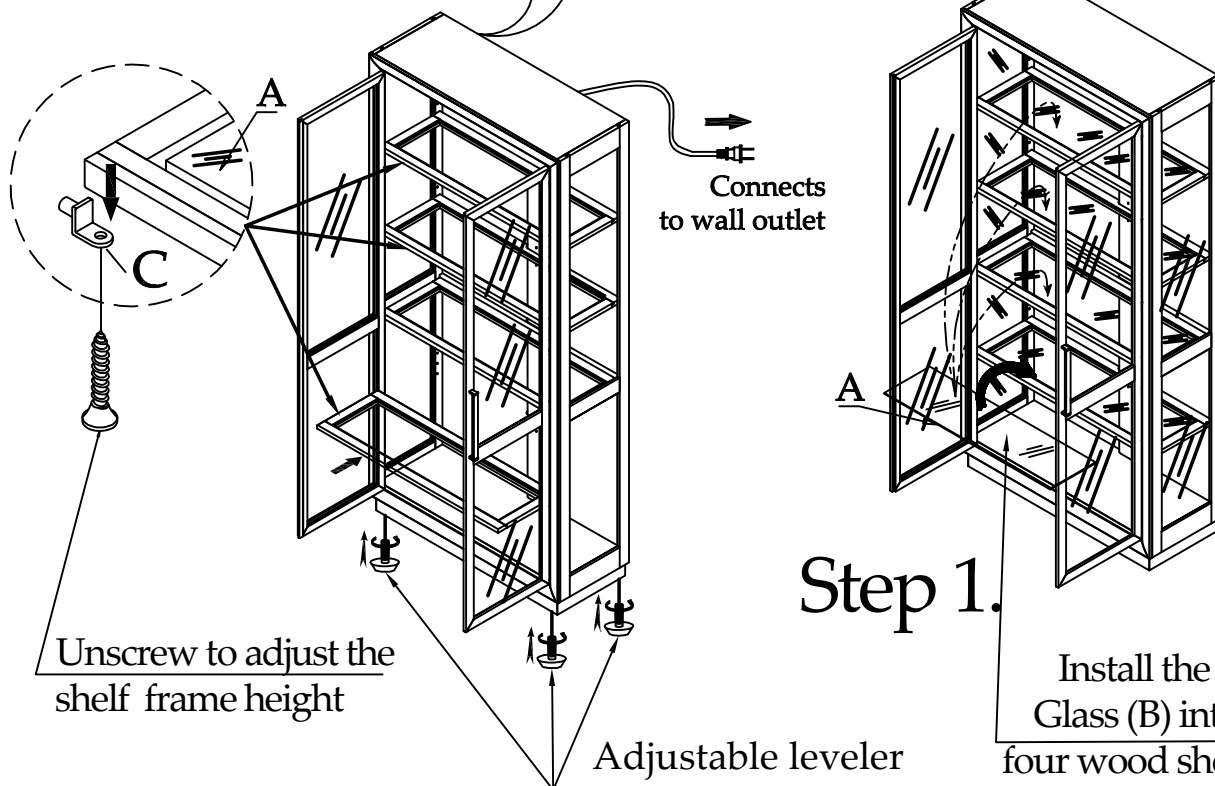

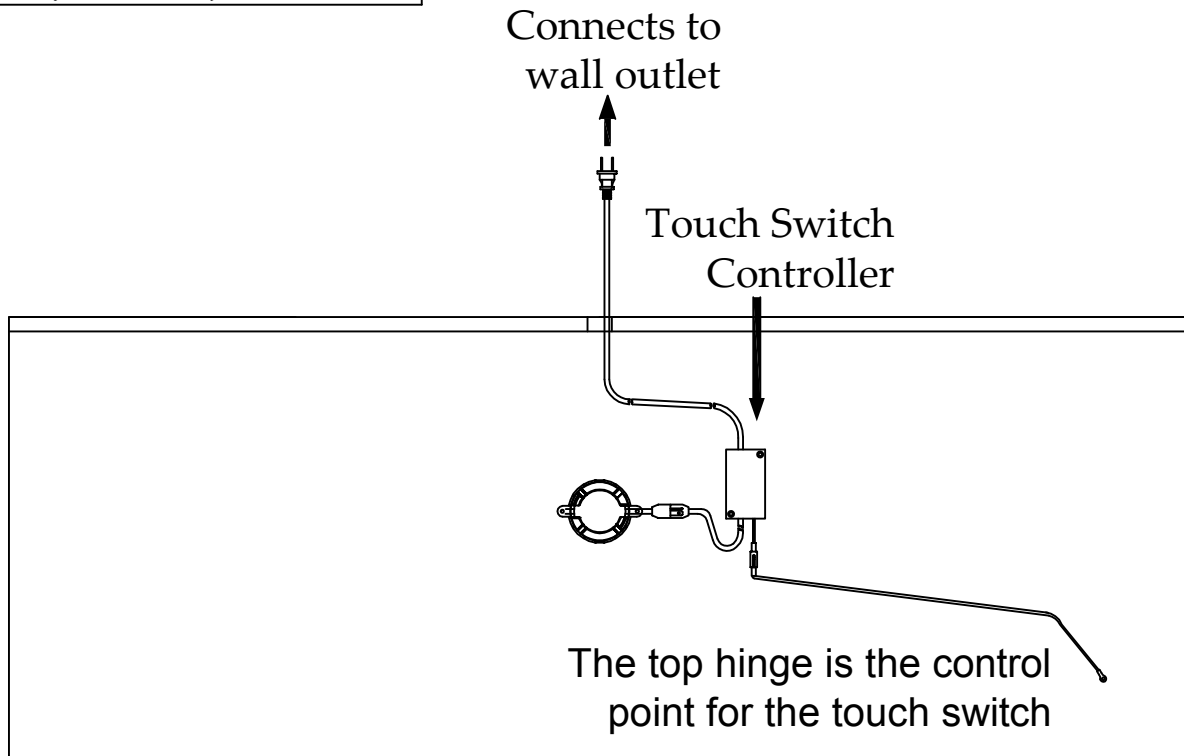

#50354
Display Cabinet

The Light installed in the top of the cabinet is controlled by a Touch Switch connected to the top hinge of the Right Hand Door.

Furniture Tipping Restraint Kit (B)
(Inside White Plastic Bag)

The light in this cabinet is a very energy efficient Light Emitting Diode (LED) fixture which is engineered to have a normal life expectancy of several years when used in a typical home.

The entire fixture set has been checked at the factory to verify operation. After connecting the power cord to a working electrical wall outlet, if the light fails to operate, the most common problem is probably a loose connection within the wiring. Verify that all wiring connections are secure.

The 'bulb' or LED contained within the fixture is not a replaceable component part within the light fixture. If required the fixture would need to be replaced.

If the light fails to operate after verifying power to the wall receptacle and checking all electrical wiring connections, contact Customer Service.
